Location: Osaka, Japan

Summary

Senior Full-Stack Software Engineer with 9+ years of experience building scalable SaaS applications across AI, healthcare, retail, and enterprise domains. Strong expertise in frontend development with Next.js, React, React Native, and TypeScript, complemented by hands-on experience building backend services using Python and Node.js.

Experienced in developing modern web and mobile applications, integrating AI-powered features including Retrieval-Augmented Generation (RAG) and AI agents, and delivering cloud-native solutions on AWS and Google Cloud Platform. Passionate about building intuitive user experiences, writing maintainable software, and collaborating with cross-functional teams to deliver high-quality products.

Experience

Madoromi, Inc | Frontend Engineer

Dec 2025 – Jun 2026 | Tokyo, Japan | Remote

- Developed the user-facing web application and laboratory management portal using Next.js, delivering responsive, intuitive, and high-performance user experiences.
- Built cross-platform iOS and Android applications using React Native and Expo with a shared codebase for both platforms.
- Developed reusable UI components, application state management, and API integrations to support scalable and maintainable frontend architecture.
- Collaborated with backend engineers to integrate REST APIs and deliver end-to-end features across the application.
- Contributed to the development of a genomic healthcare platform that combines DNA test results with continuously updated medical research to provide personalized health insights.

ScalyX.ai | Backend Infrastructure Engineer / Frontend Engineer

Jan 2024 – Dec 2025 | USA | Remote

- Designed and developed cloud-native backend infrastructure using Python, FastAPI, Google Cloud Platform, Terraform, Cloud Run, and PostgreSQL.
- Developed core backend services for a retail management SaaS platform, including Inventory, Product Management, CMS, POS integration, Logistics, Shipping, Stripe Payments, and Tax Automation.

- Designed Retrieval-Augmented Generation (RAG) pipelines and AI Agents to automate business workflows and knowledge retrieval.
- Developed AI-powered UI features that transformed AI-generated outputs into interactive business workflows and user interfaces.
- Developed data migration engines enabling onboarding of new merchants from external retail platforms.
- Designed scalable cloud deployment pipelines and infrastructure automation using Terraform.
- Collaborated across frontend, backend, and product teams to rapidly ship MVP features and production releases.

StoreHub | Full-Stack Engineer

Jul 2017 – Dec 2023 | Kuala Lumpur, Malaysia | On-Site

- Joined as a Junior Engineer and progressed to Senior Full-Stack Engineer while contributing to multiple large-scale SaaS products.
- Contributed to more than six commercial SaaS products, including POS systems, internal business platforms, retail management services, and customer-facing web applications.
- Developed modern web applications using React, Vue.js, Node.js, and cloud-native backend technologies.
- Built scalable backend APIs supporting thousands of daily retail transactions across Southeast Asia.
- Improved application performance, scalability, and system reliability for mission-critical retail services.
- Collaborated with product managers, designers, QA engineers, and cross-functional teams to continuously deliver new platform capabilities.
- Mentored junior engineers and participated in architecture discussions during later stages of the project.

Education

Malaya University | 2016

Bachelor of engineering in computer and intelligent systems engineering

Skills & Abilities

Frontend

- Next.js, React, React Native, Expo, TypeScript, JavaScript
- React Query, Redux, Zustand, Context API
- Tailwind CSS, Material UI, shadcn/ui
- Responsive Web Design, SSR, ISR, SEO

Backend

- Python (FastAPI), Node.js (Express.js, NestJS)
- RESTful APIs, GraphQL, Authentication (JWT, OAuth, Clerk, Privy)
- Background Jobs, Event-driven Architecture, Microservices

AI & LLM

- Retrieval-Augmented Generation (RAG), AI Agents, OpenAI API, Vertex AI
- Prompt Engineering, Semantic Search, Vector Search
- AI Workflow Automation

Cloud & DevOps

- AWS (EC2, Aurora RDS, Lambda, EventBridge Scheduler, S3, Secrets Manager)
- Terraform, Docker, Kubernetes
- GitHub Actions, CI/CD

Databases

- PostgreSQL, MySQL, MongoDB, Redis
- Database Design, Query Optimization, Data Migration, Performance Tuning, Caching Strategies

Testing

- Jest, Vitest, Playwright, Cypress

Architecture & Engineering

- Full-Stack Web Development, Mobile Application Development
- Cloud-native Applications, Multi-tenant SaaS
- REST API Design, System Design, Agile Development

Tools

- Git, GitHub, Jira, ClickUp, Figma, Postman, Swagger / OpenAPI
- Linux (Ubuntu), Cursor, Claude Code
